Campaign details

Closing thoughts

Q&A

# What is Malvertising?

Yes, I learned this word when doing this presentation

## **Portmanteau for Malicious Advertising**

"the use of online advertising to spread malware"

## **First references date back to 2007**

Good old days of SWF.

## **Distribution handled by ad networks**

Customizable targeting, visibility in high-profile websites, hard to find, easy to hide.

# How it works?

- User searches some keyword
- User is presented with ads that match the search
- User clicks the ad assuming it's legitimate
- User ends up in a phishing website
  - Credential/Data farming
  - Fake downloads
  - Tech support scams

<https://infosec.exchange/@jeromesegura>

The image displays three screenshots of Google search results, illustrating how malvertising works. The top screenshot shows a search for "Energy Bill Payments" with a sponsored ad from "Energy Bill Payments" (http://www.payfastsolutions.site/energy/billing) and a call button. The middle screenshot shows a search for "slack" with a sponsored ad for "Slack" (https://www.slack.com). The bottom screenshot shows a search for "obsidian" with two sponsored ads for "Obsidian Free" from "catchyplatform.com" and "sdesigno.com". Red boxes highlight these two ads, indicating they are suspicious or malicious. The ads for "Obsidian Free" are designed to look like legitimate product promotions, but they are likely phishing attempts or malware distribution points.

# Discovery and Analysis

How we stumbled upon this campaign.  
Technical analysis of the infection chain

# Discovery

**First seen in April**  
Systems flagged  
Trojan-Downloader from a  
typo-squatting domain

**OSINT showed connection to  
malicious advertising**

**Targets utility applications  
notion, slack, discord, zoom**

# Analysis (TLDR)

## **Victim searches application**

Search engine shows sponsored link at the top to download application.

## **Victim opens phishing website**

Clicking the ad triggers a redirect chain to validate the user.

## **Victim downloads fake installer**

Running triggers the persistence and payload dropping, ends with legit application installation.

# Malicious Ad

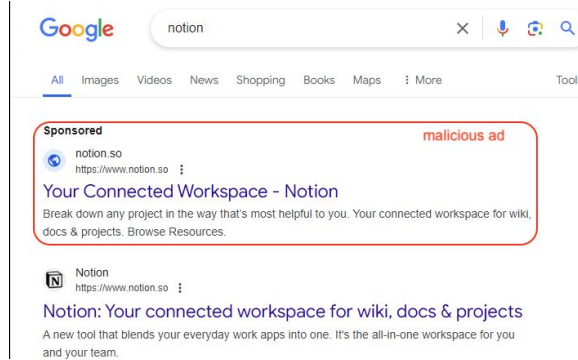

## Notion for Mac & Windows

Work without distraction on your own or with your team.

2024-07-21 17:27:14 - Access approve IP: .248
```

### **Allowed or denied IPs**

Validate access to script?

Validate access to phishing website?

```
2024-08-21 12:27:56 - Доступ запрещен IP: [REDACTED] ← access denied
2024-08-21 12:29:26 - Доступ разрешен GETCODE IP: [REDACTED]
2024-08-21 12:29:35 - Access approve IP: [REDACTED]
2024-08-21 12:29:36 - Доступ запрещен IP: [REDACTED]
2024-08-21 12:30:07 - Доступ разрешен GETCODE IP: [REDACTED]
2024-08-21 12:30:11 - Доступ разрешен GETCODE IP: [REDACTED]
2024-08-21 12:30:13 - Access approve IP: [REDACTED]
2024-08-21 12:30:58 - Доступ запрещен IP: [REDACTED] ← Access allowed
2024-08-21 12:32:21 - Access approve IP: [REDACTED]
2024-08-21 12:32:45 - Доступ разрешен GETCODE IP: [REDACTED]
2024-08-21 12:33:02 - Access approve IP: [REDACTED]
2024-08-21 12:33:16 - Доступ разрешен GETCODE IP: [REDACTED]
```

### Allowed or denied IPs

Access to phishing website?

Access to script?

Infection chain logging?

### Always same pattern

1. Access allowed GETCODE IP
2. Access approve IP

```
Доступ разрешен 2.php IP: 177, UUID: не предоставлен
Доступ разрешен 3.php IP: 177, UUID: не предоставлен
Доступ разрешен по IP: 13
Доступ разрешен по IP: 14
Доступ разрешен 2.php IP: 13, UUID: 37A1
Доступ разрешен 3.php IP: 13, UUID: 37A1
Доступ разрешен по IP: 14
Доступ разрешен 2.php IP: 14, UUID: A7D9
Доступ разрешен 3.php IP: 14, UUID: A7D9
Доступ разрешен по IP: 13
Доступ разрешен по IP: 13
Доступ разрешен 2.php IP: 13, UUID: 37A1
Доступ разрешен 3.php IP: 13, UUID: 37A1
Доступ разрешен по IP: 144
Доступ разрешен по IP: 144
Доступ разрешен по IP: 19
```

not provided

Access allowed  
via IP

**Allowed or denied IPs**  
Infection chain logging?

**Always same pattern**

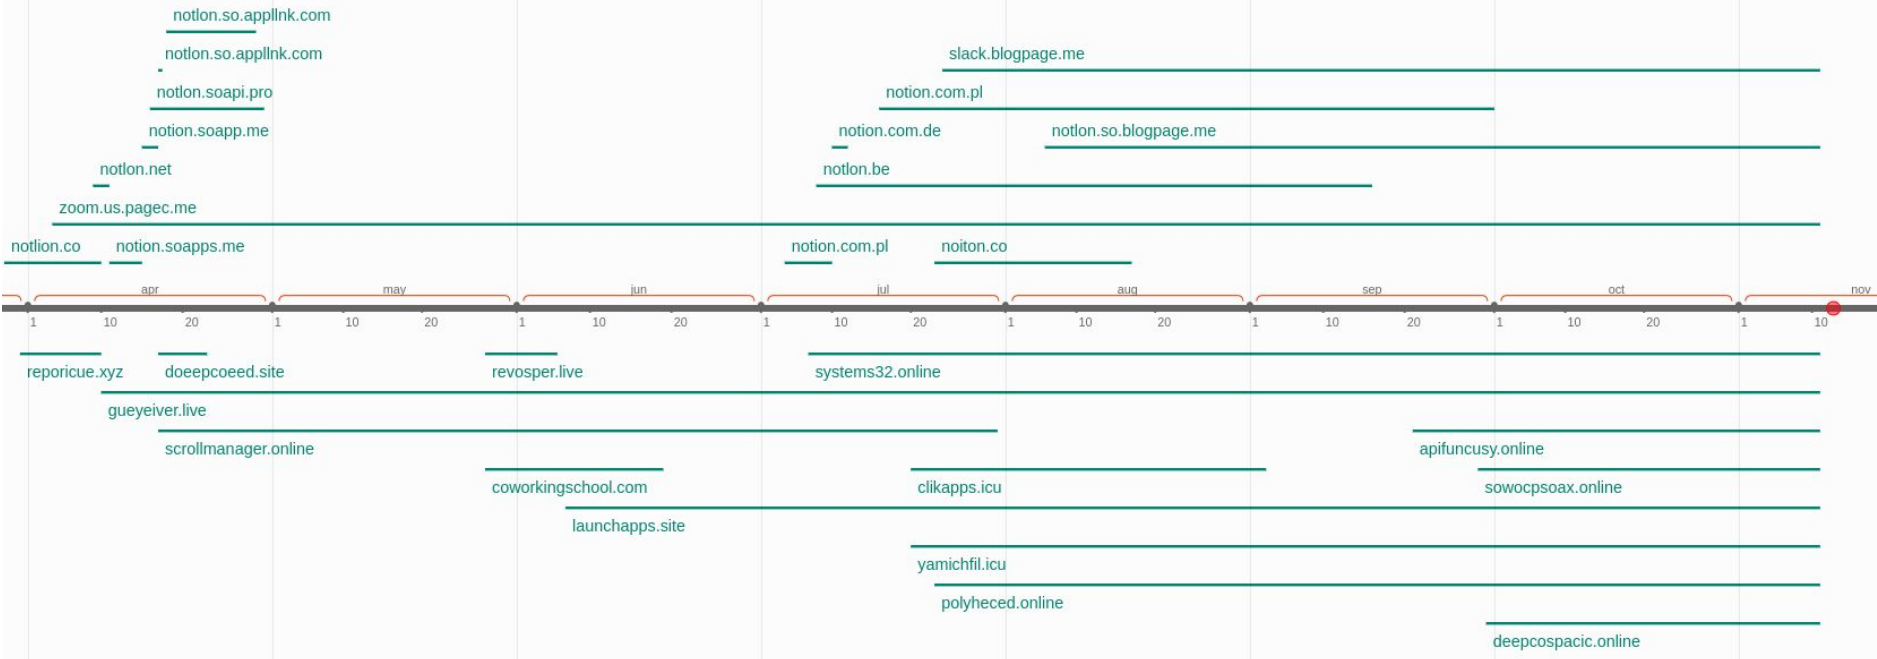

1. Access allowed
2. 2.php
3. 3.php

**Potential to be used to  
measure infections**

# Campaign details

Timeline and infection telemetry

# Campaign Details – Timeline

1

```
Доступ разрешен по IP: .23
Доступ разрешен 2.php IP: .23, UUID: не предоставлен
Доступ разрешен 3.php IP: .23, UUID: не предоставлен
Доступ разрешен по IP: .23
Доступ разрешен 2.php IP: .23, UUID: 4DDE
Доступ разрешен 3.php IP: .23, UUID: 4DDE
Доступ разрешен по IP: .23
Доступ разрешен 2.php IP: .23, UUID: 4DDE
Доступ разрешен 3.php IP: .23, UUID: 4DDE
```

2

## Concatenate all access.txt

Lines have timestamps, drop duplicates

## Measure based on

If (1) then new infection

If (2) then bot check-in

**Victims cannot fetch next stage without IP being whitelisted**

## Data source

5 different domains  
Between 23<sup>rd</sup> July and  
29<sup>th</sup> October

## Numbers

Over 3 000 unique IPs  
Over 10 000 records

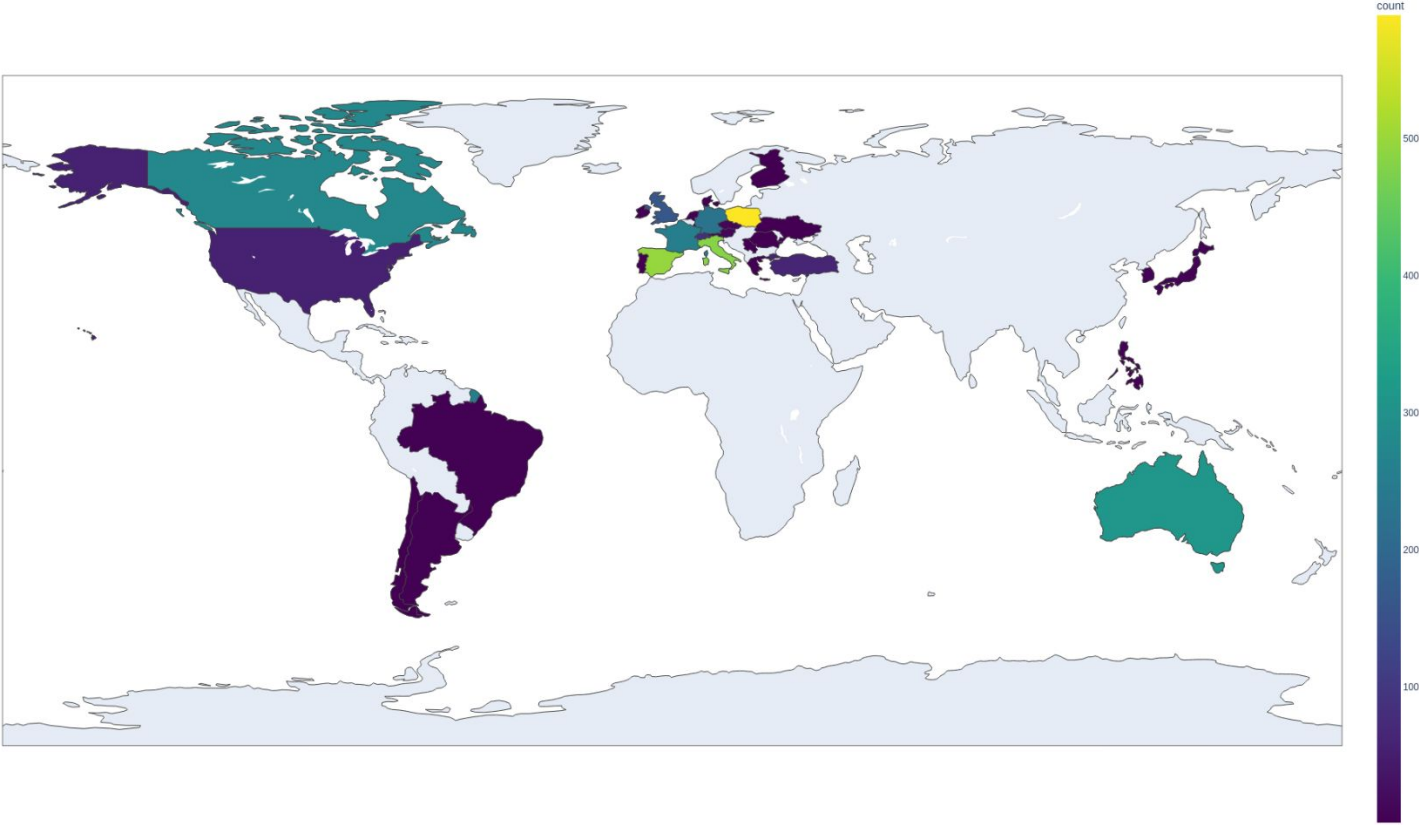

## 31 infections/day

Median of 5 daily  
infections

# Campaign Details – Geo Distribution (Unique IPS)

Data from access.txt (2024-07-23 to 2024-10-29)

Country	IPs
POL	590
ESP	496
ITA	483
AUS	310
CAN	277
FRA	256
DEU	228
GBR	163
CHE	83
TUR	63

# Infections Timeline

**Spikes in new infections**  
Investment in ads?

**Dead zones**  
Changes in the infection chain?

# Closing thoughts

## **The 3 stooges**

3 000 infections in 3 months  
High incidence in Europe  
TTPs most likely changed

## **Accessible distribution vector**

Third-party legitimate services  
Easy to target specific victims  
Easy to hide

## **What can we do**

Educate users?  
Ad-blockers?  
More control from ad networks?

# Thank you!
